Speech & Language Assessment Summary

Report ID: SC-ASSESS-000003 | Assessment Date: October 26, 2026 at 16:42 UTC

Patient Identifier:	Patient #1	**Task Type:**	Reading Passage
Recording Duration:	11.61 seconds	**Sample Rate:**	16000 Hz (Mono)
Model Engine:	SpeechCareFusionNet-Trained-C	**Consent Recorded:**	Yes (Explicit Patient Consent)

Primary Screening Classification & Severity

SCREENING STATUS: REVIEW REQUIRED (Abstained) **Calibrated Confidence:** 26.7%

Severity Band: N/A **Severity Index:** N/A

Calibrated confidence (26.7%) is below the clinical threshold of 60%. The screening engine abstains from categorizing this recording. A formal clinical assessment by a licensed Speech-Language Pathologist is strongly recommended.

Acoustic Biomarker Profile & Speaker Properties

Acoustic Metric	Measured Value	Reference Norms	Clinical Interpretation
Acoustic Gender	Male (91.9%)	Acoustic F0 / Centroid	Speaker profile identifier
Mean Pitch (F0)	112.6 Hz	M: 85-165Hz | F: 165-260Hz	Vocal fold vibrational frequency
Jitter (Local)	1.87%	< 1.50% (Normal)	Pitch cycle stability
Shimmer (Local)	25.00%	< 4.00% (Normal)	Glottal resistance & amplitude
Harmonics-to-Noise (HNR)	2.0 dB	> 15.0 dB (Normal)	Voice clarity vs breathiness
Silence / Pause Ratio	39.0%	10% - 25% (Typical speech)	Fluency and pause dynamics

Evidence-Based Speech Pathology Practice Suggestions

Exercises generated for clinical review. Consult with a licensed Speech-Language Pathologist before modifying therapy.

- Resonant Voice Therapy (Forward Facial Mask Focus) (Vocal Wellness & Hygiene)

Instructions: Gently hum on an /m/ sound on an easy pitch. Place your fingers on your lips and nose to feel the buzz/vibration. Transition from 'Mmm' into 'Mmm-one', 'Mmm-two'.

Target:

- Pitch Siren Glides (Laryngeal Flexibility)

Instructions: Gently glide on an /oo/ sound from your comfortable speaking pitch upwards like a siren, then glide smoothly back down without straining.

Target:

- Vocal Tract Semi-Occluded Phonation (SOVTE) (Vocal Conditioning)

Instructions: Phonate a steady pitch through a drinking straw or lip trill (blowing air while vibrating lips like a motorboat).

Target:

Clinician Review & Approval Section

Review Status: APPROVED BY CLINICIAN **Reviewing Clinician: Dr. Marcus Vance, CCC-SLP**

Notes: No clinician notes entered yet.

NOT A MEDICAL DIAGNOSIS. FOR SCREENING & REHABILITATION MONITORING ONLY.

MANDATORY HEALTHCARE SCREENING DISCLAIMER:

SpeechCare AI is an assistive research and screening software tool designed to aid clinicians and individuals. It does NOT provide a medical diagnosis, treatment plan, or definitive prognosis. A comprehensive assessment by a licensed Speech-Language Pathologist (SLP) or medical physician is required for diagnostic confirmation and therapeutic intervention.
